**Subject:** SPP Construction Closeout Report

Annette:

I am sorry not to have responded sooner to your message about approval of the SPP Construction Closeout Report. We appreciate the recent changes and updates to that report and your continuing reports on the water levels and contaminant levels at the treatment system.

CDPHE cannot, at this time, approve the Closeout Report. The latest changes reconfigure it as a Construction Closeout Report, but since construction is an integral part of the current problems with the system, it cannot be approved. I think it would be useful and appropriate to document the information contained in the report by including it in this year's HRR Annual Update.

As I mentioned at meetings at the Site last week, the temporary modifications that were approved by the WQCC were to allow time for remedial projects to be implemented and to stabilize. The Site now needs to demonstrate that the temporary modifications are being met (which they apparently are) and to present modeled projections that the underlying standard will be met when the temporary modifications expire.

Please contact me to discuss this further.

Carl
